

Energy and greenhouse gas

Tarmac is the UK's leading sustainable building materials and construction solutions business. Our innovative products and solutions not only deliver the infrastructure needed to grow the UK economy today but also help to create a more sustainable built environment for the country's long term future.

The impact of climate change and the transition to a zero carbon society are arguably the most important challenges for our generation. We recognise our responsibility in taking climate action and are fully committed to achieving the UK Government's ambition of becoming net zero by 2050. This policy confirms our approach to improving energy efficiency performance, reducing the carbon footprint of our operations and supporting our customers with innovative, sustainable products, services and solutions which contribute to a low carbon built environment.

On our journey to net zero we will ensure that we:

- Comply with all energy and carbon legislation and other relevant voluntary codes or practices
- Set objectives and targets, act and review performance to reduce energy consumption and greenhouse gases

- Secure line management responsibility for continually seeking new ways to improve energy efficiency performance and reducing the carbon footprint of our business and products
- Review energy opportunities and implement energy management plans and targets at all sites
- Train employees in energy management and net zero carbon, appropriate to their role
- Continue to implement opportunities to switch from fossil based to lower carbon energy sources
- Invest in low carbon, energy efficient technologies and ensure that energy efficiency and net zero carbon is considered in our business decisions
- Engage with our supply chain to fully understand the scope 3 emissions associated with the products and services we buy
- Support customers to take advantage of our products' whole life benefits in mitigating and adapting to climate change
- Actively engage with policy makers, academia and industry to enable a low carbon future
- Provide products, services and solutions which contribute whole-life, low carbon benefits to the built environment
- Regularly review and report on our performance.

Accountability for energy and the management of greenhouse gas emissions starts with the Tarmac Executive Committee. In fully supporting and endorsing this approach we will not only be visible in its delivery but also make the necessary information and resources available to implement it. This policy is communicated to all Tarmac employees and those working on our behalf. It is also available for other interested parties on our website. Every employee is expected to work in accordance with the commitments set out in this policy. This policy will be reviewed, as a minimum, annually.

Peter Buckley
Senior Vice President,
Tarmac
