

ULTICRETE

# Proven performance

The ultimate heavy duty solution  
Dawson's Wharf, Tyne Tees

## The challenge

Cracked and worn floor to the warehouses.

A traditional full removal and replacement was prohibitive due to cost of work and disruption.

## Our solution

An open graded asphalt receiving course was filled with a specifically developed, free flowing, non shrink grout.

The result was a highly durable surface that was trafficked within 24 hours of installation.

## Results and benefits

With traditional reinstatement not a viable option due to cost and time constraints the fast installation and tough properties of the ULTICRETE delivered the perfect solution to the client's project requirements.

The combined cement and asphalt flooring proving itself to be resilient against the demands of its industrial location.
